Task 1:

Approach:

- Used the `requests` library to retrieve HTML content from CodeTechMentor's "About Me" page.

- Used `BeautifulSoup` to parse the HTML and extract:

1. The creator's name (`span class="creator-name"`).
2. Introduction text (`div id="intro-text"`).
3. Social media links (`a class="social-link"`).

Findings:

Successfully retrieved the name, introduction text, and social media links.

Output:

Task 2:

Approach:

- Used the `requests` library to fetch HTML content from the PriceOye webpage listing Apple laptops.

- Parsed the page with `BeautifulSoup` to extract product names (`h2 class="product-name"`), prices (`span class="product-price"`), and discounts (`span class="product-discount"`).

- Excluded discontinued products by checking for specific labels (`span class="discontinued"`).

Findings:

Extracted laptop names, prices, and discount information, excluding discontinued products.

Output:

Task 3:

Approach:

- Utilized `Selenium` to navigate through the first five pages of property listings.
- Extracted property details (location (`span class="property-location"`), price (`span class="property-price"`), number of beds (`span class="property-beds"`), baths (`span class="property-baths"`), and area (`span class="property-area"`)).
- Parsed the HTML using `BeautifulSoup` and formatted the data into a pandas DataFrame.

Findings:

Collected structured data for properties in DHA Lahore, including pricing and property details (Beds, Baths, and Area).

Output:

Task 4:

Approach:

- Opened Google using `Selenium`, searched for "Best economy rates for Pakistan in Tests," and clicked on the first result.
- Navigated to ESPNcricinfo and scraped cricketer statistics (matches played (`span class="matches-played"`), wickets taken (`span class="wickets-taken"`), and economy rates (`span class="economy-rate"`)).
- Parsed the data into a pandas DataFrame for further analysis.

Findings:

Extracted and displayed cricketer stats for Pakistan in Test matches, including economy rates.

Task 5:

Approach:

- Used `Selenium` to open Cristiano Ronaldo's YouTube channel.
- Extracted video titles (`h3 class="video-title"`), view counts (`span class="view-count"`), and dynamically loaded comments count by scrolling (`span class="comment-count"`).
- Parsed the page with `BeautifulSoup` and collected the required data.

Findings:

Gathered video titles, view counts, and comment counts from Ronaldo's official YouTube channel.
